

Important Decal Update Notice

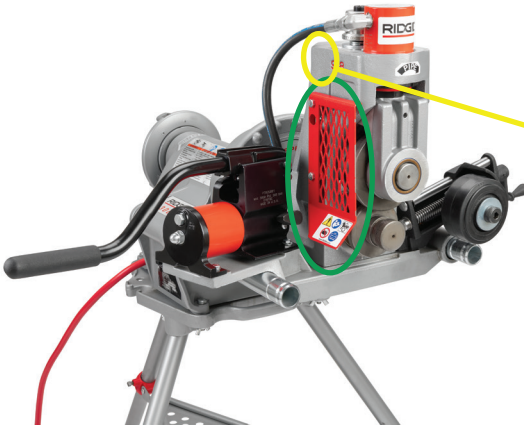

Figure 1 – RIDGID® 918 Roll Groover

Figure 2 – 918 Guard/QR Decal
(Cat. # 80228)

Date: 08/01/24

This is a Decal Update Notice involving all RIDGID® 918 Roll Groovers. All RIDGID 918 Roll Groovers have been supplied by RIDGID with a point of operation guard (see green circle in Figure 1). It has come to our attention that in some cases these guards are being removed in the field, increasing the risk of crushing and other serious injuries.

The RIDGID 918 Roll Groover operator’s manual warns that the guards should be kept in place and that the roll groover should not be operated with the guard removed. Always follow product warnings and instructions on proper operation. Removal of the guard increases the risk of injury. The 918 operator’s manual is available at below link or through QR code in Figure 2.

[918 Manual Link](#)

To raise awareness that the 918 Roll Groover should not be used without the guard, RIDGID is making available the 918 Guard/QR Decal, Cat. # 80228 (Figure 2) for placement on 918 Roll Groovers in the field. These decals are available free of charge by contacting RIDGID ProTools Technical Services at 888-743-4333 or ProToolsTechServices@emerson.com.

Apply the 918 Guard/QR Decal on the body of the 918 Roll Groover above the guard and to the left of the “918” model marking (see yellow circle in Figure 1). If needed, clean the area prior to applying. If your 918 Roll Groover is missing the guard, do not operate the roll groover until the guard has been replaced. Replacement guards are available through your local RIDGID distributor.

If you have any questions regarding this Important Decal Update Notice or would like to receive additional decals contact RIDGID ProTools Technical Services at 888-743-4333 or ProToolsTechServices@emerson.com.
